I know that using the formula of the area: $S_A = \frac{L \cdot W}{2}$ where L and W is the length and width of the rectangle respectively, but this is only if the rectangle is a simple rectangle. What about a polygon? Can the area of a polygon be calculated using the formula above? A: Yes, the area formula is valid for polygons, as long as the sum of the lengths of the sides is the perimeter of the polygon. If you have no information about the polygon, you can use the formula for a square. There's no reason to limit the area formula to simple rectangles, and in fact the formula is correct for any polygon. Q: Converting an immutable dictionary to a string I'm currently trying to convert an immutable dictionary to a string. Unfortunately, the code below keeps throwing an "Attempt to mutate" error, even though I have converted the variable to immutable in the beginning. What am I doing wrong? @IBAction func saveData() { var text = self.textField.text // Replace all periods with underscores let replacer = RegExReplacer(regex: "\.", replacer: "_") let string = replacer.replace(text) // Convert to a string to send it to the server let ids = string.toArray() // Convert back to an immutable dictionary let dict = Dictionary(uniqueKeysWithValues: ids) // Attempt to convert to a string let string2 = ids.map { aId647c40b
